

Flour cooling system

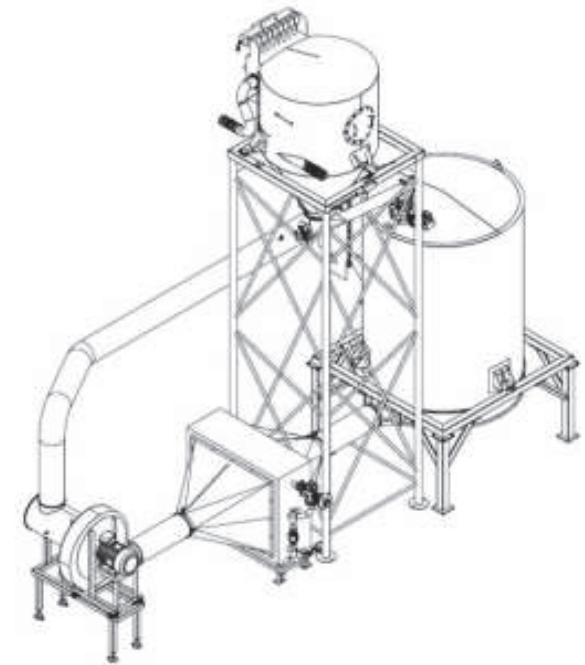

8 Times cheaper than CO2 Cooling

Advantages:

- Low operating cost (unlike CO²) → 8 times more cost efficient than CO₂
- No acceptance from authorities → CO₂ needs acceptance
- Gentle cooling (flour: do not change gluten and molecular chain through a violent thermal shock) -
- Uniform temperature of the mass = regularity of the final product
- Easy to integrated

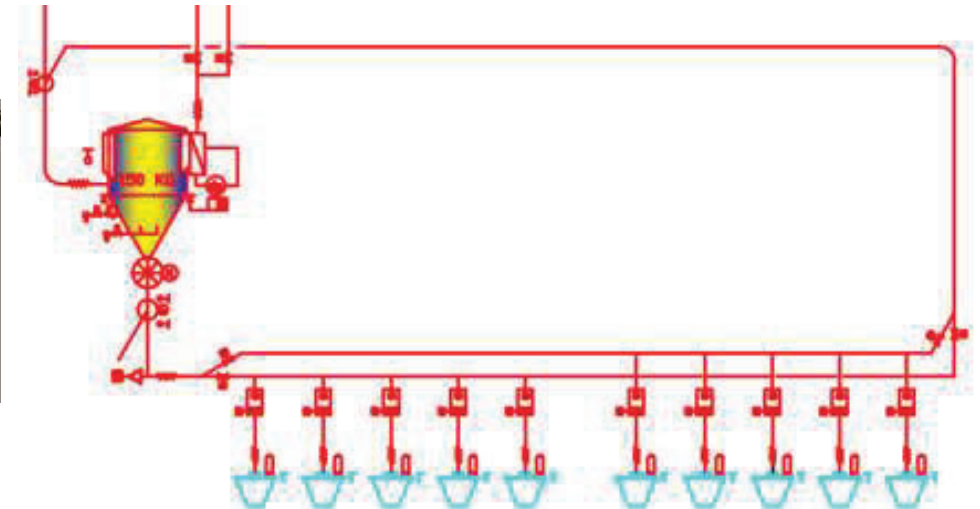

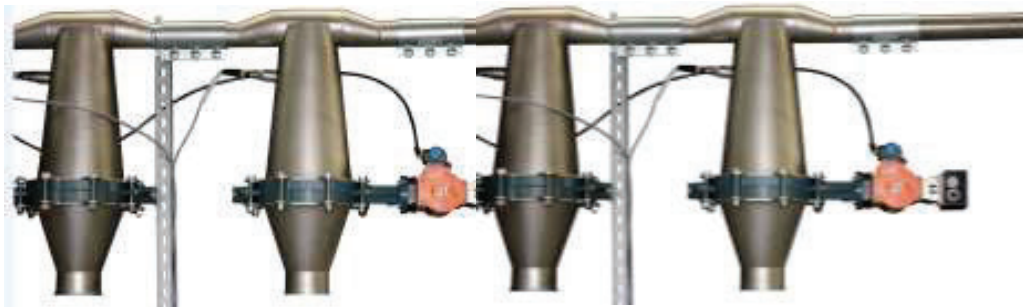

Cooling station : System overview

Automatic feeding of flour duster

• The flour is pneumatically conveyed to the using point

• No screw – No motor → No maintenance

- No maintenance
- NO Manual feeding
- No dust emission: clean installation/clean floor
- Control and traceability of flour,
- No additional depressor
- Supplies several lines with a single unit,
